

MODIFIED ASHWORTH SCALE (MAS)

Instructions & Clinical Testing Form (Bohannon and Smith, 1987)

Patient Name: _____

Date: _____

General Instructions

- **Positioning:** Place the patient in a **supine position**. Instruct the patient to remain fully relaxed.
- **Flexor Muscle Testing:** If testing a muscle that primarily flexes a joint, place the joint in a maximally flexed position and move to a position of maximal extension over exactly **one second** (count "*one thousand one*").
- **Extensor Muscle Testing:** If testing a muscle that primarily extends a joint, place the joint in a maximally extended position and move to a position of maximal flexion over exactly **one second** (count "*one thousand one*").

Scoring Classification

SCORE	DESCRIPTION / CRITERIA
0	No increase in muscle tone.
1	Slight increase in muscle tone, manifested by a catch and release or by minimal resistance at the end of the range of motion (ROM) when the affected part(s) is moved in flexion or extension.
1+	Slight increase in muscle tone, manifested by a catch, followed by minimal resistance throughout the remainder (less than half) of the ROM.
2	More marked increase in muscle tone through most of the ROM, but affected part(s) easily moved.
3	Considerable increase in muscle tone, passive movement difficult.
4	Affected part(s) rigid in flexion or extension.
